

DecodeMyBrain

Phase 1 Delivery Plan — Native Laravel MVP

First deliverable of the decodemybrain.com Laravel rebuild: a working register → pay → take-test loop, with basic UI and a read-only admin view of users.

Prepared: 17 June 2026

1. Phase 1 Goal

Deliver a focused, working MVP of DecodeMyBrain on native Laravel: a member can **register**, **pay** for a plan, and **take the brain assessment** and get a basic report — wrapped in a **basic UI with a public home page** — and the team gets a **basic admin dashboard** to see every user and all their data.

2. Phase 1 Scope & Work

#	Item	What we do
1	User registration	WIRE Confirm & polish signup + login + email OTP + password reset on the native flow.
2	Payment portal	WIRE Stripe Cashier checkout + pricing page wired to the correct one-time prices + webhook. Sells normal plans only — no credit model in Phase 1.
3	Test assessment	CONFIRM Questionnaire flow + scoring + basic PDF report working end-to-end for a paid user.
4	Basic UI	BUILD Shared layout + the flow screens (auth, pricing/checkout, member dashboard shell) plus a public home/landing page at <code>/</code> (hero + product intro + sign-up / pricing CTAs).
5	Admin dashboard (basic)	BUILD Read-only user-360 : a list of every user and a detail page showing each user's plan, transactions, test reports, and brain scores. Built on the existing admin module.

Roles

Exactly **two roles, no others**: **Admin** (full dashboard access — in Phase 1 this is the read-only user-360 view) and **User** (front-end member: registers, pays, takes the test, views their report — no dashboard access). Builds on the existing

`AdminAuthenticated` middleware.

3. Pages & Routes in Phase 1

Area	Routes / pages
Public	Home / landing at <code>/</code> ; <code>/pricing</code> .
Auth	Signup, login, email OTP, password reset.
Member	Checkout (start / success / cancel), assessment flow, member dashboard shell + report download.

Admin	<code>/admin</code> login, <code>/admin/users</code> (list every user), <code>/admin/users/{id}</code> (user-360 detail: plan, transactions, reports, scores).
Webhook	<code>/stripe/webhook</code> (keeps entitlement in sync with payments).
