

Data Workflow

Haan. Is repo me data flow roughly aise hai.

1. DB Folder Runtime DB Nahi Hai

DB folder me SQL dumps hain:

- decodemy_app.sql = Laravel app ka data dump
- decodemy_wp.sql = old WordPress full DB dump
- wp_users_fresh.sql = WordPress users/meta ka focused dump

App chalne par data directly DB/*.sql files se read/write nahi hota. Ye files import/restore ke liye hain. Runtime par Laravel MySQL database use karta hai, config laravel-app/config/database.php aur .env se aata hai.

2. Login / User Data Kaha Se Aata Hai

Auth ke 2 mode hain:

- Legacy/WordPress mode: Laravel WordPress API call karta hai:
 - <https://decodemybrain.com/wp-json/custom/v1/login>
 - https://decodemybrain.com/wp-json/custom/v1/user?user_id=...
- Native mode: Laravel local users table se login karta hai.

Code: laravel-app/app/Http/Controllers/UserController.php

Login ke baad session me ye store hota hai:

```
session(['user_id' => $user_id]);  
session(['user_details' => $userData]);  
session(['user_dob' => $userData['date_of_birth']]);
```

Important: session('user_id') mostly WordPress user id hai, Laravel users.id nahi.

User ka app mirror wp_users table me store hota hai. Model:

laravel-app/app/Models/WPUsers.php

3. Assessment / Questions Workflow

Questions ka master data DB tables se aata hai:

- questions
- dimension_questions
- skill_test_questions
- introvert_extrovert_questions

User answers separate tables me save hote hain.

Main brain test:

- question_answers_main = ek test attempt header
- question_answers = individual question answers
- brain_scores = calculated result
- wp_users.brain_profile_id = final profile id

Flow:

1. User /questions/q1 se start karta hai.
2. First answer par question_answers_main row create hoti hai.
3. Har question answer question_answers me save/update hota hai.
4. Last question q25 par status complete hota hai.
5. BrainResultsController->add_brain_results() score calculate karta hai.
6. Result brain_scores me save hota hai.
7. Matching profile profile_types se find hoti hai.
8. Final profile wp_users.brain_profile_id me store hota hai.

Code:

- laravel-app/app/Http/Controllers/QuestionsController.php
- laravel-app/app/Http/Controllers/BrainResultsController.php

4. Dimensional Workflow

Tables:

- dimensional_question_answers_main
- dimensional_question_answers
- user_dimensional_score

Flow:

- User answers save hote hain dimensional_question_answers me.
- Completion par scores calculate hote hain.
- Scores user_dimensional_score me save hote hain.

5. Skill Test Workflow

Tables:

- skill_test_answers_main
- skill_test_question_answers
- skill_brain_scores
- wp_users.skill_brain_profile_id

Flow:

- Skill test answers save hote hain.
- Last question ke baad BrainResultsController->add_skill_brain_results() call hota hai.
- Score skill_brain_scores me save hota hai.
- Final skill profile wp_users.skill_brain_profile_id me update hota hai.

Code: laravel-app/app/Http/Controllers/SkillTestController.php

6. Introvert / Extrovert Workflow

Tables:

- introvert_extrovert_answer_main
- introvert_extrovert_question_answers
- wp_users.introverted_extroverted

Flow:

- 10 questions answer hote hain.
- Answers DB me save hote hain.
- Score calculate hota hai.
- Final result introverted ya extroverted as wp_users.introverted_extroverted me save hote hain.

Code: laravel-app/app/Http/Controllers/IntrovertExtrovertQuestionController.php

7. Package / Payment Workflow

Package entitlement ka main source:

- wp_users.package

Mirror:

- users.package
- users.activated_date

Central writer: laravel-app/app/Services/Billing/EntitlementService.php

Package update 3 jagah se aa sakta hai:

- Free package select: buy_package()

- Access code redeem: `enter_access_code()`
- Stripe checkout/webhook:
 - `laravel-app/app/Http/Controllers/CheckoutController.php`
 - `laravel-app/app/Http/Controllers/StripeWebhookController.php`

API se WordPress package sync bhi hai:

`/api/update-package-status`
